

STRUCTURAL ENGINEERS ASSOCIATION OF NEW YORK

Presents

Sponsored by: **GRACE CONSTRUCTION PRODUCTS**

Please join us to learn about the intriguing challenges and solutions for the **DESIGN AND CONSTRUCTION OF THE NEW SOUTH FERRY TERMINAL STRUCTURAL BOX**, which is currently under construction. The \$265 million project includes complicated design issues and construction methods scheduled to be completed in the August 2007. The Design Build project is being designed and constructed by Schiavone-Granite Helmar Joint Venture.

SANKAR CHAKRABORTY will discuss with us some of the deficiencies of the existing South Ferry Loop Station, the contract and procurement process as well as the design build box itself with its challenges in design and construction, traffic management, excavation and monitoring, and the development of an archeological research management plan required for the project along with the archeological findings.

Speaker:

SANKAR CHAKRABORTY

Design Manager for South Ferry Terminal project and # 7 Subway Extension project in Manhattan with MTA New York City Transit and Capital Construction.
